JUMP ON BOARD the Dual Enrollment Train at Coffee High School

Sophomores, juniors, and seniors are taking advantage of dual enrollment opportunities between East Central Technical College and Coffee High School. This could be YOU!!

Through Dual Enrollment, these students are receiving training which “jump starts” their career by allowing them to receive high school course credit and college course credit while still in high school. These students are preparing themselves for gainful employment while also increasing their career opportunities.

Some of the students are enrolled in Nail Technician. During the course, the students learn the process of giving manicures, pedicures, applying tips with overlays, wraps, and sculptured nails, and nail art designs. The students use the latest technology in the application of artificial nails and learn artistic and creative nail designs. Courses also include anatomy and physiology, sanitation and disinfection, safety, and simplified chemistry of nail products. Upon completion of this program and graduating high school, a student can take the state boards exam to either go to work or go back to school for the full cosmetology program.

Students can enroll in the Car Audio Installer program. This program provide both classroom and hands-on learning in the areas of safety, AC/DC circuits, solid state devices and installation and service practices in car audio installation as well as provide an entrance point for high school students into the electrical programs.

Students can also enroll in the Game Programming course. This program provides both classroom and hands-on learning in the areas of design and development of electronic games and programming games in Visual Basic, including online games. Students taking this course use a program called Game Maker to try to reproduce levels from some of their favorite classic video games. The students learn how to reproduce sprites and how to set collision geometry as they also learn how to apply principles of Game Design. Student will also be provided a head start in the computer information systems industry for high school students who anticipate furthering their training in a related diploma or associate degree program.

High school students interested in taking a course at East Central Technical College can contact their guidance counselor or Andrea Fletcher (High School Coordinator) at 229-468-2049 or afletcher@eastcentraltech.edu.

NOW is the time to jump on board!!
